

## **PONTIAC GRAND AM ABS MODULE REMOVAL**

Jack up the car and take off the front driver side tire.

Take out the front splash shield.

The ABS module is directly behind the washer fluid bottle.

You can't miss it, it has a large electrical connector going into the side of it.

All you have to do is take out a few 10mm bolts to loosen the washer bottle and a few more to remove the ABS module from the hydraulic pump unit.
